

70. For the Primary Examiner's convenience, applicant respectfully submits that the term "output element" (in claim 70) can be read on the hub 14 of Figure 1, that the first component can be said to be readable on the disc-shaped output member 34 of Figure 1, that the second component is believed to be readable on the carrier 23 of Figure 1, that the non-rotatable connection between the second component (23) and the runner (such as 13) is established by the rivet(s) 17, and that the non-rotatable connection between the second component (23) and the piston (such as 27) is established by the rivet(s) 36.

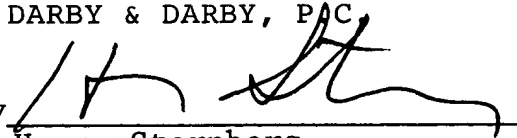

The additional fee is enclosed.

A favorable Action on the merits of all claims which are now active in this case at a reasonably early date is earnestly solicited.

Respectfully submitted,

DARBY & DARBY, P.A.C.
